VIII - FIRST AID

Eyes
Immediately flush with large amounts of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Seek medical attention at once.

Skin
Immediately flush with water for at least 15 minutes. Seek medical attention. If clothing, shoes and/or jewelry come in contact with the product, they removed immediately and laundered before re-use.

Ingestion
Immediately drink large quantities of water. DO NOT induce vomiting. Seek medical attention at once. DO NOT give anything by mouth if the person is unconscious or if having convulsions.
Inhalation
If person experiences nausea, headache or dizziness, person should stop work immediately and move to fresh air until these symptoms disappear. If breathing is difficult, administer oxygen, keep the person warm and at rest. Seek medical attention. In the event that an individual inhales enough vapor to lose consciousness, person should be moved to fresh air at once and seek medical attention immediately. If breathing has stopped, artificial respiration should be given immediately. In all cases, ensure adequate ventilation and provide respiratory protection before he person returns to work.

IX -TOXICOLOGY AND HEALTH INFORMATION

Routes of Absorption
Inhalation, skin, eye, ingestion

Warning Statements and Warning Properties
CAUSES RESPIRATORY TRACT IRRITATION. CAUSES EYE AND SKIN BURNS. CAN CAUSE LUNG DAMAGE.

Human Threshold Response Data
Odor Threshold: Approximately 0.9 mg/M 3 (0.3 ppm) based on odor of chlorine.
Irritation Threshold: No data for Sodium hypochlorite.
However, decomposition products may be irritating.
Immediately Dangerous to Life or Health: No Data. However, Sodium hypochlorite has the potential to be immediately dangerous to life or health.

Signs, Symptoms and Effects of Exposure
Inhalation
Acute: Inhalation of this material is irritating to the nose, mouth, throat and lungs. It may also cause burns to the respiratory tract with the production of lung edema, which can result in shortness of breath, wheezing, choking, chest pain, and impairment of lung function.
Inhalation of high concentrations can result in permanent lung damage.
Chronic: Repeated inhalation exposure may cause impairment of lung function and permanent lung damage.

Skin
Acute: Dermal exposure can cause severe irritation and/or burns characterized by redness, swelling and scab formation. Prolonged skin exposure may cause destruction of the dermis with impairment of the skin at site of contact to regenerate.
Chronic: Effects from chronic skin exposure would be similar to those from single exposure except for effects secondary to tissue destruction.

Eye
Severe irritation and/or burns can occur following eye exposure. Contact may cause impairment of vision and corneal damage.

Ingestion
Acute: Irritation and/or burns can occur to the entire gastrointestinal tract, including the stomach and intestines, characterized by nausea, vomiting, diarrhea, abdominal pain, bleeding, and/or tissue ulceration.
Chronic: There are no known or reported effects from chronic exposure.

Medical Conditions Aggravated by Exposure
Asthma and respiratory and cardiovascular disease

Interactions With Other Chemicals Which Enhance Toxicity
None known or reported

Animal Toxicology
Acute Target Organ Toxicity
INHALATION LC50: No available data
ORAL LD50: Approximately 3-5 g/kg (rat)
DERMAL LD50: > 2 g/kg (rabbit)
Causes burns to eyes and skin.

Chronic Target Organ Toxicity
There are no known or reported effects from repeated exposure.

Reproductive and Developmental Toxicity
There are no known or reported effects on reproductive function or fetal development.

Carcinogenicity
Sodium hypochlorite has been shown not to be carcinogenic in laboratory animals.

It is not included as a carcinogen by IARC, OSHA, NTP, or EPA. IARC has concluded that there is inadequate evidence for the carcinogenicity of hypochlorite salts in laboratory animals and there is no data available from studies in humans.

Therefore, IARC considers hypochlorite salts to be not classifiable as to their carcinogenicity to humans.

Mutagenicity
Sodium hypochlorite has been shown to produce damage to genetic material when tested in vitro. Studies in vivo have shown no evidence of mutagenic potential for this material. Chemicals with potent biocidal activity, typical of hypochlorite compounds, may compromise the integrity of many of the treated cells, which remain viable during an in vitro assay. This result would likely produce cellular changes giving rise to a response indicative of mutation. It is judged that the risk of genetic damage is insignificant for sodium hypochlorite because of its biocidal activity, lack of mutagenicity in vivo, and failure to produce a carcinogenic response.

Aquatic Toxicity
Aquatic LC50 - approximately 0.6 mg/l (bluegill)
approximately 1 mg/l (daphnia, 48 hours)
