

SUSTAIN

- Concentrated
- Optimized
- Sustainable

Product Description

SUSTAIN has been specially formulated to deliver first class results with the optimized GreenEarth Cleaning System. Because GreenEarth's liquid silicone dry cleaning fluid features a low surface tension, it wets and penetrates fibers quickly. Thus SUSTAIN is carried quickly and easily to soils allowing them to be suspended and removed with no resettling onto the fibers. Garments are cleaner and brighter. Dyes and fabrics are safe. Lint and static are minimized. Moisture is controlled. And because SUSTAIN is concentrated and specifically formulated to be used with the GreenEarth Cleaning System, less detergent is required. Better outcomes, less claims and

re-cleans, satisfied customers, and a lower detergent budget all help add to the sustainability of your dry cleaning business.

Directions for Use

SUSTAIN and the GreenEarth liquid silicone dry cleaning fluid can be used in all machines designed to operate with Class III-A solvents. It can be used in both single-bath and two-bath cleaning systems, can be added using a dosing unit or an external injection device, and is added during the main washing step.

For activated clay systems, the recommended dosage is between 0.25 and 0.5 ounces of SUSTAIN per 10 pounds (8 to 16 mL per 5 kg) of working load* capacity. Since SUSTAIN is highly concentrated, please do not exceed 0.5 ounces per 10 pounds.

For two-bath systems (continuous distillation, without Activated Clay), or cartridge-only machines, the recommended dosage is 0.7 - 1.0 ounces of SUSTAIN per 10 pounds (22 - 33 mL per 5 kg) of working load* capacity.

*Working Load = typical full load of mixed garments at 80% of the machine's maximum rated capacity. Example = 60 pounds max capacity x 80% = 48 pounds Working Load.
